

The Centre for Blood Research presents...

**AN INTRODUCTION TO
UBC BEST**

August 11th | 12-2PM | LSC 1510

Biomedical Engineering Student Team's aim is to build feasible biomedical devices that benefit the medical community using student skill and expertise. We engage with healthcare professionals, patients, and advisers to create a contextually appropriate solution to unmet medical needs and assemble interdisciplinary teams for the projects.

Currently we are looking for new ventures and new expertise that can help us innovate, market, and implement the projects. In this session, we will present our existing projects and offer ways for YOU to get involved.
