LSC 3 | 12:00 - 1:00PM

Dr. David Sweet

Professor, Oral Diagnosis and Forensic Odontology
Director, BOLD Forensic Laboratory
Faculty of Dentistry, UBC

“An Introduction to Forensic Science Scholarship”

Research outcomes from other disciplines typically reach the forensic sciences indirectly. Only then can results be assessed for potential adoption into forensic circles of any promising new technologies or methods. Forensic scientists must depend on others to possibly improve things from evidence recognition, recovery and handling to sample analysis and interpretation. Some forensic scientists are correctly positioned to assist with fostering meaningful collaborations with basic and applied scientists. Forensic casework benefits greatly from such collaborations. This presentation will discuss these realities and challenges, and offer insights into how researchers might assist in various forensic science disciplines.
