

CBR Virtual Summer Seminar Series

Wednesday, July 21 | 11:00am - 12:00pm PT

Dr. Ed Pryzdial, *Clinical Professor*
Pathology and Laboratory Medicine
Centre for Blood Research
Canadian Blood Services, Centre for Innovation

Topic: “Multifunctional Clotting Factors in Fibrinolysis and Virus Infection”
Presented by: Alexandra Witt, Scott Meixner, Dr. Michael Sutherland, Henry West and Dr. Alexander Leatherdale

In the Pryzdial Lab we study blood coagulation proteases and their cofactors. These proteins are multifunctional and their important roles in diverse physiological and pathological processes is well-acknowledged. Here we will discuss novel functions of clotting factors in fibrinolysis and virus infection, and how the latter links clotting to innate immunity’s complement system.
