1:00PM - 2:00PM PT

Life Sciences Centre
1003 (LSC3) & Zoom

“Beyond the gas cargo: Immunological Properties of Erythroid Progenitors/precursors in Physio-pathological Conditions”

Dr. Shokrollah Elahi

Professor of immunology/School of Dentistry, Faculty of
Medicine and Dentistry, UofA

Recent studies have highlighted immunological properties of erythroid progenitors/precursors defined as “CD71+ erythroid cells (CECs)” in physio-pathological conditions. In this talk, I will provide an overview of recent advances in this field and highlight the diverse immunological roles of these cells in health and disease. In particular, I will focus on the cross-talk between microbial communities and CECs, and their role in cancer progression.
